1 issue affecting this group.

Experience it as each user

A blind user hears the page read aloud as a linear stream.

This is the order a screen reader announces, top to bottom. Layout, columns, and styling all disappear: only the sequence and the labels remain.

HEADING 2 Bio

TEXT Yusuf Pisan is a Teaching Professor in the Computing & Software Systems Division at the University of Washington Bothell. Previously he was an Associate Professor at the University of Technology, Sydney where he formed and led the UTS Games Studio. He was a visiting professor at Harvey Mudd College, University of Southern California, Worcester Polytechnic Institute (WPI) and IT University of Copenhagen (ITU).

LINK [Computing & Software Systems Division](#)

LINK [University of Washington Bothell](#)

LINK [UTS Games Studio](#)

TEXT His research interests include enabling technologies for computer games, the design of virtual environments that support collaborative work, and computer science education. He founded the Australasian Conference on Interactive Entertainment conference series and helped foster the Australian games community. His list of publications can be found at Google Scholar.

HEADING 2 [Teaching](#)

TEXT I have taught small classes, large (700-person) classes, first-year classes, graduate level classes, supervised masters and PhD students, experimented with hybrid and online classes, used traditional lecturing, active learning,

flipped classrooms, collaborative meaning making and gamified classrooms. I received the UTS Teaching Award in 2006. I was awarded the UWB Distinguished Teaching Award in 2023.

LINK [UTS Teaching Award](#)

LINK [UWB Distinguished Teaching Award](#)

TEXT I have decided to make all my evaluations public to help future students make more informed choices, or at least know what they are getting into when they decide to take a course from me. It also is an interesting and fun historical record! Happy spelunking into my teaching evaluations going back for many many years.

Image missing alt text

SERIOUS

WCAG 1.1.1 Non-text Content (Level A)

A screen reader will announce the file name or simply "image", giving a blind user no idea what the picture shows.

WHERE (IMG)

```

```

► **Suggested fix**

Built as a teaching tool. Checks a deterministic subset of WCAG 2.1 on fetched HTML, so it complements but does not replace a manual audit or a screen reader walkthrough. See the project README and ASSUMPTIONS for scope and limitations.
